Application/Control Number: 10/086,994

Art Unit: 3763

DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-7 are drawn to a cartridge barrel, classified in class 604, subclass 222.
 - II. Claims 8-18 are drawn to a medication pump with a motor, a magnet and magnetic sensor, classified in class 417, subclass 44.1.
 - III. Claims 19-22, drawn to method of detecting the rotation of an element, classified in class 73, subclass 1.22.
 - IV. Claims 23-37 and 52-56 are drawn to medical system with a medical pump, classified in class 604, subclass 151.
 - V. Claims 38-51 are drawn to a method loading and detecting a medication cartridge, classified in class 128, subclass 898.
 - VI. Claims 57-63 are drawn to a medical pump with a processor, classified in class 604, subclass 65.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions IV and I & II & VI are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because in invention I

Application/Control Number: 10/086,994

Art Unit: 3763

the barrel has ridges, with invention II it has a magnet and a magnet sensor, with invention III it has a processor. The subcombination has separate utility such as invention I can be used with an injection pen, invention II has magnets which can be used to pump the medical device such as a solenoid pump, Invention III has a processor which can store information about the pump as well as command certain functions of the pump.

- 3. Inventions III, V and I, II, IV, & VI are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by another materially different apparatus such as an injection pen or an implantable pump. Invention V does not mention anything about a sensor, and thus does not necessarily need any of the inventions claimed.
- 4. Inventions III and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects, and different functions. Invention III deals with detecting rotation of an element with a magnet while invention V deals with detecting an old medication cartridge and then prompting the user to act according.

Application/Control Number: 10/086,994

Art Unit: 3763

- 5. Inventions I and II & VI are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as being used in an automatic injection pen. See MPEP § 806.05(d).
- 6. Inventions II and VI are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as being used to pump the medical device such as in a solenoid pump. See MPEP § 806.05(d).
- 7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
